

Bacteria standard media

Components are dissolved in dH₂O. Aliquots of the stock solution are added to the culture medium in the required dilution (for sterility tests 50%, 10% and 1% dilutions are used in the CCAC).

Unused stock solution has to be discarded, can be frozen in aliquots or to be autoclaved to prevent bacterial growth.

Pepton	0,80%
Glucose	0,10%
Beef Extract	0,10%
Yeast Extract	0,10%
