I. Basic principles

In accordance with the currently applicable legislation and following consultation with the internal Occupational Safety and Health Specialists and the Staff Unit for Occupational Safety & Health and Environmental Protection, the University Board has defined the current overall conditions for work at the University of Duisburg-Essen in the form of this action plan, also taking technical, organisational and personal protective measures into consideration by order of priority.

As the overall conditions and legal provisions are currently subject to continuous change, this action plan will be gradually adapted and expanded as required. Additional instructions have been issued for specific issues (examinations involving physical presence, research activities and conducting practical courses).

Department-specific measures are to be defined and documented in the form of ‘supplementary risk assessments’ on the basis of this action plan (see Section II.6).

1. Avoiding contact

First and foremost, the 1.5-metre rule for social distancing applies.

In order to achieve this, human density must be reduced, e.g. by

- Adjusting working hours and reducing the number of staff present at the same time
- Dividing staff into separate teams or
- Separating workspaces, e.g. by installing transparent protective barriers

Furthermore, mobile working from home is to be offered wherever possible.

2. Adhering to hygiene measures (see Attachment 3)

All members of our university can personally contribute to mutual protection by observing the hygiene rules: please apply the A H A + L + C -rule (Abstand (distance) - Hygiene - Alltagsmaske (face mask) + Lüften (ventilation) + Corona app)

It is now obligatory to wear face masks in all indoor premises of the University of Duisburg-Essen (Section IV.2)

3. Mutual responsibility

All members of staff who experience symptoms that could indicate a COVID-19 infection are requested to immediately contact a doctor or the medical on-call service provided by statutory health insurance physicians (helpline: 116117) by phone in order to discuss the next steps. You may not enter university buildings until your symptoms have been conclusively diagnosed and should inform your line manager and the Human Resources department immediately.

These basic principles are to provide guidance for all arising questions. Please find further details on individual matters in the sections below.

Numerous other regulations and FAQs are currently available on the UDE website.

II. Working conditions/operations
1. Workplace design

Personal contact during operations is to be reduced, using both technical and organisational measures. Use of offices and other rooms by more than one person at a time is to be reduced to the minimum required to keep up operations. If it is necessary for multiple individuals to use the same room at the same time, no less than ten square metres of space must be available for each person present in the room whenever the nature of tasks to be fulfilled allow for this requirement to be met. If this requirement cannot be met due to the nature of the tasks to be fulfilled, the line manager must ensure an equivalent level of protection for staff by means of other suitable protective measures, in particular ventilation and suitable barriers between the individuals present.

As a rule, there are no issues regarding offices that are exclusively used by one member of staff. In shared offices, the workstations are to be arranged in such a way that a distance of 1.5 metres is ensured and that staff do not sit facing one another directly without protection. Small two-person offices may currently not be used by two persons at the same time if no additional protective measures are implemented. The distance rule must also be adhered to when entering or leaving the office.

In laboratories and workshops, the workplaces are only to be used to an extent that ensures the 1.5-metre distance rule is adhered to.

Agreed schedules or shifting to rooms that are currently not used for teaching can help reduce the intensity of use of individual spaces and better spread present staff. Other remedies include alternating between laboratory and office work or mobile working, at least on individual days.

In order to prevent infection transmission via aerosols, permanent or at least regular ventilation with short air-exchange intervals must be ensured. The intensity and intervals at which rooms are aired must be adapted to the number of individuals that use the room regularly and the activities pursued in it (e.g. sports or other activities with increased aerosol output). If rooms are not equipped with a ventilating system, offices must be thoroughly aired for at least three minutes every 60 minutes and meeting and seminar rooms for at least three minutes every 20 minutes (see also FAQs regarding the internal action plan). Forced ventilation continuously provides rooms (e.g. laboratories and lecture halls) with fresh air and has a positive effect on infection prevention and control.

Sufficiently sized handover areas are to be established for handing over files, documents, intermediate products, workpieces, deliveries, etc. These areas may then only be entered in turns.

If it is impossible to keep the minimum distance, priority is to be given to installing a barrier (e.g. plastic screens, plastic curtains, framed plastic film). This applies to consultation scenarios with changing interlocutors, visitor enquiries in the libraries or when operating machinery together, for example.

Teams or groups are to be formed in order to ensure that the same persons are present at the same times in units where this approach is suitable. Meetings between members of different teams should be avoided wherever possible (different break rooms or break times). The constellation of the teams is to remain unchanged.

2. Equipment

Devices, tools and work surfaces should be used exclusively by a single person wherever possible. Equipment that is jointly used (photocopiers, kitchenettes, machinery) is to be cleaned using a cleaning agent at least once every workday or before it is passed on, e.g. in the case of tools (see
Section IV.4). Disinfection is not mandatory but may be helpful if a large number of people use the equipment or if it is frequently passed on.

3. Separate storage of work clothing and personal protective equipment

Work clothing and personal protective equipment (PPE) is to be stored separately from everyday clothes and for each individual person. Regular cleaning must be organised.

4. Conferences/meetings/interaction with visitors:

Work-related meetings of several individuals are to be reduced to a minimum. Technology such as video and telephone conferencing systems are to be primarily used to conduct conferences and meetings and to interact with the public.

If physical presence is necessary, gatherings are to be organised in a way that enables compliance with the distancing and hygiene rules. The number of available seats must be reduced to the number that may be used. Proper ventilation of the rooms must be ensured (in case of ventilation through windows, the windows must be opened wide for at least three minutes every 20 minutes). Depending on the number of participants, meetings may have to be held in classrooms that are currently not used for teaching.

By all means, it must be ensured that the participants and required contact information is recorded to allow trackability. If the minimum distance of 1.50 m is adhered to, a list of participants is sufficient. Personal data provided for tracking purposes is subject to data protection regulations. It must be protected from access by third parties and destroyed after a four-week retention period.

Try to prevent queues by arranging appointments and defining access regulations. If, in exceptional cases, this is not possible, waiting persons are to be guided by means of distance markings.

5. Common rooms and shared spaces

Even in small common rooms, a 1.50-metre distance is to be kept to the nearest person.

A maximum of two persons may use a lift at the same time. If two persons are already using a lift, please wait for the next one or take the stairs. Please bear in mind that it is now more important than ever to give priority to persons with limited mobility.

Keep a distance from others and avoid close encounters within buildings.

Wherever the building design allows, directions of movement have been defined and are indicated by signs and markings in highly frequented stairways. Most kitchenettes and copy rooms are so small that only one person may work there at a time. Washrooms are usually not very spacious, and the washbasins are close to one another and the door. Units that are immediately next to one another without separation may not be used simultaneously. Please wait if the room is occupied.

6. Risk assessment and instruction
The protective measures specified here are applicable to all areas in general use at UDE. Measures for individual organisational units are to be defined, revised and updated in the form of supplementary risk assessments (RA; based on the separate form in Attachment 1) by the responsible line manager.

In this context, factors of mental stress to staff resulting from the corona crisis, such as high intensity of work over a long period of time, blurred lines between working time and personal time, different communication channels, fear of infection, worry about family members who belong to a high-risk group, strain of family and care duties, are to be taken into account. You have the opportunity to request assistance from the Work Psychology Specialists for evaluating factors of mental stress as part of the risk assessment.

Similar to current procedures, it may be useful to create different partial RAs depending on the job profiles. For office settings, one comprehensive supplementary RA will be sufficient in many cases. Moreover, the measures defined in existing RAs continue to apply.

The Occupational Safety and Health Specialists and the university’s Occupational Health Service are also available for consultation on these matters.

Staff must be instructed on adjustments to the supplementary measures. Line managers are responsible for ensuring that instructions are provided. The line manager or another suitable person must present the instructions either face-to-face or in a video conference. Both the fact that the instructions have been provided and the attendants have to be documented.

The supplementary risk assessment and a record of instruction are to be filed as additional documents alongside the existing documents (usually the red ‘Arbeitsschutz’ (occupational safety and health) binder; section 2, potentially with an additional ‘Corona’ divider). In addition, a digital version (e.g. completed file or scanned copy) is to be kept available (e.g. on a network drive) to allow random checks by university management, occupational safety and health staff or members of the Staff Council.

7. Preventive occupational health care/consultation by the university’s medical officers

UDE offers its staff preventive occupational health care. Consultation by the university’s medical officers, in their function as trustworthy, neutral persons, can also help assess particular risks due to underlying conditions or your individual constitution. Please find the contact details here: https://www.uni-due.de/verwaltung/organisation/betriebsarzt.php

8. Admission of external parties (e.g. contractors)

Admission of external parties is to be restricted to a minimum.

Contact details of external persons, the times when they were present and their contacts at UDE must be documented by the person who awarded the contract. External parties are to be instructed on the infection control measures applicable at UDE with regard to SARS-CoV-2 before entering the building/taking up work. An information sheet and instructions have been made available for this purpose. The documents can also be downloaded from the coronavirus download page as Word files.
III. Employment-related regulations

1. Obligation to report infections

Staff are obliged to report any infection or suspected infection with COVID-19 due to contact with an infected person before taking up work. The relevant notification is to be sent to the responsible line manager and the Human Resources Department (personaldezernat@uni-due.de).

Please find answers to further questions under questions relating to employment law.

A chart is available that illustrates in which cases you are subject to quarantine. Please find the legal basis for this in the quarantine ordinance for NRW (Quarantäneverordnung; only available in German).

2. Mobile working from home

The option to work from home and the relevant guidelines on recording working hours have been extended until 31 March 2021 for the time being. Therefore, line managers are to continue to allow mobile working, potentially alternating with work on campus, and develop a staff schedule for their area of responsibility. In mobile working contexts, staff must ensure availability during regular working hours.

3. Work-related travel

With regard to work-related travel, restrictions are still in place for international (air) travel; entry restrictions, quarantine measures and restrictions to public life are still to be expected in many countries.

Essential work-related trips to countries or regions for which the Federal Foreign Office has not issued any travel warnings may be undertaken. For this purpose, the person requesting the trip must explain why it is essential in his or her request.

**International work-related travel to high-risk areas must not be undertaken under any circumstances.**

Line managers may approve work-related trips in accordance with the principles above. Decisions as to whether trips are essential are to be taken in the departments and should be documented. Strict criteria are to be applied when deciding on the necessity, also with regard to the timing (why does it have to be now?).

As the situation can change rapidly, it is essential to consult the travel and safety information by the Federal Foreign Office and the regulations of the country to be visited when approving work-related travel and once more immediately before starting the trip.

*Travel and safety information by the Federal Foreign Office*

*Federal Foreign Office travel and safety information by country*

Travel-related services are to be booked shortly before the trip and with flexible conditions wherever possible in case new travel warnings or entry restrictions are put in place.

Please refer to the website of the Department for Travel Expenses for further information.

4. High-risk groups
Persons who are at a higher risk for a severe course of COVID-19 must be specifically protected. Please find detailed descriptions of and information on this group on the website of the Robert Koch Institute (RKI) and the university website.

Since the start of the pandemic, the assignment criteria for high-risk group status have significantly changed. Age in itself, for example, is no longer a reason for a person to be categorised as a member of a high-risk group. Instead, an individual medical assessment is required.

Written confirmation by the attending physician documenting that an individual employee is a member of a high-risk group must be submitted to UDE as employer. In such cases, close consultation with the line managers and, if necessary, the university’s medical officers and the Human Resources department is required.

UDE will only have staff with a high risk work in workplaces where infection prevention can be effectively ensured (this is the case in individually assigned offices or workspaces, in laboratories and workshops with separated workbenches or when working from home).

IV. Protective equipment and its use

1. Barriers/protective screens

Protective screens that stop droplets serve to separate staff from visitors and divide workspaces if the minimum distance cannot be kept. The carpenter’s workshop, which is part of the Technical Facility Management unit (Essen campus), is currently producing protective screens, which can now be ordered.

The barriers must shield the entire workspace up to above head level (1.5 m above floor level for sitting workstations and 2.0 m for standing workstations).

Both sides of the screens must be cleaned on every workday.

2. Obligation to wear masks

According to the Corona Protection Ordinance (CoronaSchVO), a face mask is a textile cover worn over the mouth and nose (this includes tightly woven scarves, bandanas, etc.) or other means used for covering the mouth and nose made of a different material that have the same effect (surgical masks, disposable face masks, etc.).

The obligation to wear face masks applies in all indoor premises of the University of Duisburg-Essen, irrespective of whether the minimum distance is kept or not. Thus, the obligation to wear face masks is not restricted to general circulation areas (corridors, foyers, washrooms, lifts, etc.) and the entrance areas in front of buildings (e.g. when waiting queues are formed).

Exemptions from the general obligation to wear face masks apply to the groups and scenarios below:

- Persons at their workstations if it is ensured that the minimum distance of 1.5 m is adhered to
- Staff in situations where other protective measures to the same effect are in place (structural separation, separation by acrylic glass screens, etc.)
• Individuals in teaching scenarios for practical skills, e.g. in laboratories, workshops, art studios or sports contexts, for which the responsible bodies have determined that it is not required or impossible to wear masks due to the particular circumstances or specific regulations
• Individuals who have been issued a doctor’s certificate stating that they cannot wear a face mask for medical reasons (in such cases, alternative protective measures, e.g. wearing a face shield that covers the entire face, must be applied)
• Children’s daycare facilities and childminding services – specific regulations will be drafted in accordance with the ordinance regarding infection control in schools and childcare contexts (Coronabetreuungsverordnung).

Instead of having staff wear simple face masks, the university must provide staff with medical masks (surgical masks that meet the specifications set out Council Directive 93/42/EEC) or equivalent respiratory protection if
  ➔ the space requirement within a room (10 sqm/person) cannot be met
  ➔ the minimum distance of 1.5 metres cannot be adhered to
  ➔ a risk due to increased aerosol output is to be expected during the execution of tasks.

In this context, please bear in mind that technical and organisational measures regarding the occupation of rooms and the minimum distance are to be preferred at all times and that the use of personal protective equipment in the workplace must always be the last resort.

Face masks and respiratory protection masks with exhalation valves are not suitable. It is crucial that all types of masks be worn properly to cover the mouth and nose.

Procurement: Disposable surgical masks can be ordered from the central stock kept by the Technical Facility Management unit.

Use (see Attachment 2): Face masks and respiratory protection masks can be used multiple times during a day if they are put on and removed with clean hands or touching the ribbons only and it is ensured that they are stored without a risk of contamination (e.g. on a hook and not touching any surfaces). This way of storing also allows the masks to dry before the next use. However, disposable masks should not be used over a period of multiple days. Fabric face masks must be cleaned on a daily basis.

3. Hand hygiene/use of disinfectants

Virologists generally deem regularly and thoroughly washing your hands with soap sufficient. Therefore, UDE will not provide hand sanitiser in all washrooms and at all entrances throughout the campuses. For work situations where staff would have to wash their hands too frequently or where it is not possible, e.g. during face-to-face examinations, in the library, in the context of transport or consultation services, disinfectants can be ordered via the central stock kept by the Technical Facility Management unit.

In the case of written examinations, mobile disinfectant dispensers will be made centrally available. As presence on campus increases, further central locations (e.g. core access shafts) will successively be equipped with dispensers.
4. **Cleaning/disinfecting surfaces**

Plans are to be made for frequently and generally used surfaces to be cleaned at least once per workday. Facility Management will centrally clean handrails in staircases, handles of entrance, corridor and washroom doors, and control panels of lifts and photocopiers. Moreover, Facility Management will also clean (but not disinfect) desktops and telephones more frequently. Cleaning of washrooms was already included in the central cleaning services, depending on the building and the frequency of use also multiple times per day.

If the staff schedule includes working in shifts, cleaning in between shifts is to be organised. This can also be coordinated with the Facility Management Department.

Cleaning of other shared equipment (devices, table surfaces, etc.) using off-the-shelf cleaning products has to be organised within each department. It is not deemed necessary to disinfect equipment as a precaution.

Cleaning agents are also provided via the central stock kept by the Technical Facility Management unit.

5. **Disposable gloves**

Gloves are primarily used for skin protection. The coronavirus does not cause infection through the skin of your hands. It has to be in contact with the mucous membranes to harm humans. Therefore and because the virus remains infectious for longer on gloves, thus rather increasing the risks, also for others, wearing gloves is not generally recommended. At best, they may be useful in specific areas (e.g. where frequent handover of objects is required). In such cases, gloves must be replaced frequently and used gloves must be properly disposed of.

Wearing gloves for long periods of time may result in health issues. If gloves are to be worn over long periods of time on a regular basis, an occupational health assessment regarding wet work is required.

6. **Marking material/adhesive tape**

The Facility Management Department has centrally installed signs at frequently used entrances and staircases. The Staff Unit for Occupational Safety & Health and Environmental Protection provides material for labelling that individual organisational units would like to install themselves (e.g. distance marking).
Supplementary risk assessment regarding infection prevention and control
(general aspects and factors of mental stress)

This risk assessment (RA) is a supplement to the existing risk assessments and must be filed alongside these existing documents, e.g. in the ‘Arbeitsschutz’ binder (occupational safety and health, ‘red binder’). This RA focuses on the additional risks resulting from the SARS-CoV-2 epidemic. Thus, the measures stipulated in the existing RAs continue to apply unless this RA explicitly states otherwise. When defining additional protective measures, the usual hierarchy of controls (‘S-T-O-P’ principle) is to be adhered to. Consequently, measures relating to contact avoidance and hygiene are to be given priority, with personal protective measures to follow after. The order in which the items are explained in this document serves to underline this approach.

An assessment of the additional factors of mental stress during the SARS-CoV-2 epidemic has been newly included. For this purpose, two pages have been added to the RA regarding infection prevention and control. Two items from the SARS Occupational Safety and Health Regulation (SARS-CoV-2-Arbeitsschutzverordnung) have been included.

An ‘Internal action plan – Protective measures and workplace design for working during the SARS-CoV-2 epidemic’ has been published for areas in general use at UDE. The protective measures specified in that document are applicable to all areas in general use at UDE. Measures for spaces that have been assigned to individual organisational units for independent management and use are to be defined in this supplementary RA. For office settings, one comprehensive supplementary RA will usually be sufficient. Similar to existing RAs, it may be useful or even required to define different partial RAs depending on the job profiles. A list of further documentation templates and support material including links is provided at the end of this document.

Implementation of the measures (for both UDE and the unit) is a prerequisite for working on campus. If the scope of activities is to be extended, the measures must be revised.

| ☐         | Work is organised in such a way that only the same persons are present at the same time wherever possible, with individuals not being allowed to switch groups. |
|           | Examples: Forming teams/groups; no contact between teams working in parallel; different break times |
|           | Note: This serves to ensure that only one group will be unavailable if an infection is detected. |
|           | Description of the implementation (including documentation of the composition of the groups): |

| ☐         | One- and two-person offices are only used by one person at a time. |
|           | Examples: Alternating on a daily basis or after a certain number of hours |
|           | Description of the implementation (plan for the use of the relevant rooms (potentially including a schedule), for example; reference to the staff schedule if applicable): |

| ☐         | In rooms (including offices) for more than two persons, the workstations are only used to an extent that allows the minimum distance of 1.5 metres to be kept between all persons present at all times and ensures that a floor space of at least 10 square metres is available per individual present in the room. If this requirement cannot be met due to the nature of the tasks to be fulfilled, an equivalent level of protection for staff must be ensured (ventilation, barriers or, as a last resort, medical face masks (surgical masks)). |
|           | Examples: Arranging/assigning workstations diagonally across from one another; alternating staff on a daily basis or after a certain number of hours |
|           | Description of the implementation (plan for the use of the relevant rooms (potentially including a schedule), for example; reference to the staff schedule if applicable): |

| ☐         | In laboratories and workshops, the workplaces are only used to an extent that allows the minimum distance of 1.5 metres to be kept between all persons present at all times. |
|           | Examples: One person per laboratory aisle; establishing handover areas for substances/objects to be processed; distance markings |
|           | Description of the implementation: |
**Supplementary risk assessment regarding infection prevention and control**
*(general aspects and factors of mental stress)*

**As of: 1 February 2021**

---

**Fulfilled Protective measure (examples/notes)**

| ☐ | Shared spaces are used in such a way that the minimum distance of 1.5 metres is ensured at all times.  
   Examples: Copy rooms, kitchenettes, break rooms, meeting rooms; use by one person at a time; reducing the number of available seats  
   Description of the implementation: |
| ☐ | Work situations where contact between multiple persons (including visitors and contractors) is absolutely necessary are organised and carried out in such a way that the minimum distance of 1.5 metres is ensured at all times.  
   Examples: Reducing the number of seats available in meeting rooms; using larger seminar rooms for meetings; using video and telephone conferencing systems for meetings and consultation services; establishing handover areas for exchanging documents; assigning appointments; access regulations; distance markings where queues may form  
   Description of the implementation (including how reasons for the necessity are to be documented): |
| ☐ | If, in exceptional cases, the minimum distance of 1.5 metres cannot be kept, priority is to be given to installing barriers (sneeze guards).  
   Examples: Operating machinery or equipment together; contact with visitors  
   Description of the implementation (including reasons for the exception): |

**Hygiene measures**

| ☐ | If, in exceptional cases, the minimum distance of 1.5 metres cannot be kept and barriers (sneeze guards) cannot be installed, personal protective equipment (PPE) must be worn.  
   Examples: Handling loads together; teamwork for assembling or disassembling equipment; invigilating exams; instructing staff from contractors  
   Note: In such cases, either all persons involved have to wear surgical masks or one person who is in contact with multiple persons successively must wear an FFP2 (or higher) category respiratory protection mask without a valve.  
   Description of the implementation (including reasons for the exception and documentation of the persons working together): |
### Protective measure (examples/notes)

- **Equipment, material and surfaces are to be used by a single person only wherever possible. If equipment, material or surfaces are shared between multiple persons, cleaning regulations must be put in place.**
  - **Examples:** Devices, tools, telephones, keyboards, mice, tableware; providing cleaning agents
  - **Note:** Disinfection is not mandatory but may be helpful if a large number of people use the equipment or if it is frequently passed on.
  - **Description of the implementation:**

- **Cleaning of changing rooms, showers and washing facilities that are required due to the nature of work activities will be coordinated with the Facility Management Department.**
  - **Examples:** Limitation to the number required for current operations, cleaning intervals
  - **Description of the implementation:**

- **Work clothing and personal protective equipment (PPE) is stored separately from everyday clothes and for each person individually. Cleaning arrangements are in place.**
  - **Examples:** Personally assigned lockers with compartments; potentially using free lockers; sufficiently spaced hook racks
  - **Description of the implementation:**

- **Jointly used rooms are thoroughly ventilated on a regular basis.**
  - **Examples:** Airing rooms by opening the windows wide for short periods of time and potentially also opening windows/doors on opposite walls; coordinating with the Technical Facility Management unit for forced ventilation
  - **Description of the implementation:**

### Information and instruction

- **The essential regulations are communicated throughout the unit.**
  - **Examples:** Posting notices; labelling, e-mails
  - **Description of the implementation:**

Die Alltagsmaske richtig tragen
Praktische Tipps für die Handhabung von Mund-Nasen-Bedeckungen

Das Tragen einer Mund-Nasen-Bedeckung im öffentlichen Leben ist ein wichtiger Baustein, um die Verbreitung des Coronavirus SARS-CoV-2 einzudämmen.

In welchen Situationen soll eine Mund-Nasen-Bedeckung getragen werden?
Das Tragen einer Mund-Nasen-Bedeckung wird insbesondere in Situationen empfohlen, in denen mehrere Menschen im öffentlichen Raum für längere Zeit zusammentreffen oder die Abstandsregeln nicht zuverlässig einhalten können.

Tragen Sie eine Mund-Nasen-Bedeckung, wenn Sie im öffentlichen Raum den Mindestabstand von 1,5 Metern zu anderen nicht sicher einhalten können. Das gilt in der Freizeit ebenso wie am Arbeitsplatz. Besonders wichtig ist dies in geschlossenen Räumen.

In bestimmten öffentlichen Bereichen, wie im öffentlichen Nahverkehr und beim Einkaufen ist eine Mund-Nasen-Bedeckung Pflicht. Bitte beachten Sie die Einzelheiten sowie die weiteren Bestimmungen, die in Ihrem Bundesland gelten.

Bitte befolgen Sie auch die Regelungen einzelner Einrichtungen und Betriebe, wie beispielsweise Arztpraxen, Restaurants oder Friseurgeschäften.

Auch wenn Sie eine Mund-Nasen-Bedeckung tragen: Halten Sie möglichst Abstand zu anderen und beachten Sie die Hygieneregeln.
Alltagsmasken und medizinische Masken – was ist der Unterschied?

- **Medizinische Gesichtsmasken** (Mund-Nasen-Schutzmasken (MNS), Operations (OP)-Masken) sind Medizinprodukte, die vor allem dem Schutz des Gegenübers vor möglicherweise infektiösen Tröpfchen dienen.

- **Partikel-filtrierende Halbmasken** (filtering face piece, FFP-Masken) sind Gegenstände der persönlichen Schutzausrüstung im Rahmen des Arbeitsschutzes und haben den Zweck, die Trägerin oder den Träger vor Partikeln, Tröpfchen und Aerosolen zu schützen. Masken ohne Ventil filtern sowohl die eingeatmete als auch die ausgeatmete Luft und bieten daher neben dem Eigenschutz auch einen Fremdschutz, obwohl sie primär für den Eigenschutz ausgelegt sind. Masken mit Ventil hingegen filtern nur die eingeatmete Luft und ermöglichen daher keinen Fremdschutz, d.h. sie bieten keinen Schutz für das Umfeld der Trägerin bzw. des Trägers; sie sind lediglich für sehr wenige Anwendungsgebiete in Kliniken vorgesehen.

Was ist bei der Handhabung und Reinigung von Mund-Nasen-Bedeckungen (Alltagsmasken) zu beachten?

- Vor dem Anlegen einer Mund-Nasen-Bedeckung sollten Sie sich nach Möglichkeit gründlich die Hände waschen (mindestens 20 Sekunden mit Seife).
- Achten Sie beim Aufsetzen darauf, dass die Alltagsmaske Mund und Nase vollständig bedeckt und an den Rändern möglichst eng anliegt.
- Vermeiden Sie es, während des Tragens die Mund-Nasen-Bedeckung zu berühren und zu verschieben.
- Eine durchfeuchtete Mund-Nasen-Bedeckung sollte gewechselt werden.
- Zum Abnehmen fassen Sie die Mund-Nasen-Bedeckung am besten an den seitlichen Bändern an.
- Waschen Sie sich nach dem Absetzen der Mund-Nasen-Bedeckung die Hände, sobald Sie die Möglichkeit dazu haben.
- Entsorgen Sie Einwegmasken nach dem Tragen in einem Mülleimer.
- Waschen Sie textile Mund-Nasen-Bedeckungen baldmöglichst.
- Eine zuverlässige Methode der Reinigung ist das Waschen in der Waschmaschine bei mindestens 60 °C. Verwenden Sie hierfür ein Vollwaschmittel.
- Lassen Sie Mund-Nasen-Bedeckungen nach dem Waschen vollständig trocknen.
- Wie effektiv andere Methoden der Reinigung wie das Erhitzen in der Mikrowelle oder im Backofen sind, ist fraglich.

Welche Besonderheiten sind bei Kindern zu beachten?

Wenn Sie unsicher sind, ob Ihr Kind eine Mund-Nasen-Bedeckung tragen kann, weil es krank ist oder besondere Bedürfnisse hat, sprechen Sie mit Ihrer Kinderärztin oder Ihrem Kinderarzt.

CORONAVIRUS

General Protective Measures

- **Stay at home** if you have typical corona symptoms such as a high temperature and/or cough.
- **Keep at least 1.5 m** protective distance to others!
- **Wear mouth-nose cover** if the protective distance is not reached.
- **Wash your hands** regularly and thoroughly with soap and water for 20 seconds, especially after going to the toilet and before consuming any food.
- **Do not touch your face** with your hands.
- **Do not shake hands.**
- **Avoid face-to-face meetings;** alternatively, use telephone and video conferences.
- **Avoid crowds of people.**
- **Cough and sneeze** into the inside of your elbow or handkerchief, not into your hand.
- **Ventilate interiors regularly.**
- **Separate use of hygiene articles and towels.**
- **Clean skin and hand contact surfaces regularly.**
