## Introduction

The Module Handbook aims at providing a general overview on the Master Program, its modules and courses. The document also provides additional information on registration and assessment procedures, such as guidelines, forms and recommendations. Since the content is subject to frequent changes in curricula and procedures, please always check the relevant websites for actual information. This includes deviations from the course descriptions announced by individual teachers during the term.

## Aims of the Master Program Water Chemistry

The aims and learning targets of the study program are provided in the following table:

### Study aims for the Master Program Water Science

| Superior Aims of the study program  | Learning outcomes   | Target oriented module   |
|---|---|--|
| Graduated students of the program of master water science have deepened their knowledge of the chemistry of the water.  | Graduated Students of the Master Program Water Science: <ul style="list-style-type: none"> <li>use their knowledge of microbiological, chemical and chemical analytical and technological processes to assess water quality.</li> </ul>   | Modules WatChem, EnvBi, ApplMibi, PracAnalChem, ApplAnaChem, EnviChem, Stablso, Electrochem, WatPolMonit, OxProcess, MicrobPhys, Metrol  |
| Graduated students of the program of master water science can network connection in sub-area of the Water technologies represent systematically and classify in the context of research as well as international water standards. | Graduated Students of the Master Program Water Science: <ul style="list-style-type: none"> <li>know the legal foundation in the area of the international water standards</li> <li>Use this knowledge to evaluation and regulation of the research and test results</li> <li>have an overview of the current research status in the waste water treatment, technology of membrane, environmental</li> </ul> | Modules WatPolMonit, EnviChem, WatChem, AppMiBi<br><br>Modules WatChem, EnviBi, ApplMibi, PracAnalChem, ApplAnalChem, EnviChem, Stablso, Electrochem, WatPolMonit, OxProcess<br><br>Modules MemTech, TechEngWat, Wastewat-Treat, |

|   |   |   |
|---|---|---|
|   | <p>chemistry, water analysis;<br/>can critically interpret the results of the above mentioned research</p> <ul style="list-style-type: none"> <li>• can describe due to chemical and chemical-analytical, biological and technological complex relationship of the water area</li> <li>• can comprehend the contribution to the scientific discussion of society relevant issues in the areas particularly in the areas collect assessment of water quality and sustainability and resource protection; objective establish and their individually and society relevance</li> </ul> | <p>Modules ResPrac, StabIso, Biofoul, ApplAnaChem<br/>Module WatChem, ApplAnaChem, ApplMiBi, Management, WastewatTreat,</p> <p>Modules WatChem, ApplAnaChem, ApplMiBi, Management, WastewatTreat,</p> |
| <p>Graduated students of the program of master water science apply the modern methods of the laboratory work.</p> | <p>Graduated Students of the Master Program Water Science:</p> <ul style="list-style-type: none"> <li>• know various modern methods and techniques for chemical and microbiological analysis and Treatment of aqueous systems</li> <li>• can the advantage and disadvantage of those methods in relation to the answer question critically and essentially estimate</li> <li>• apply these methods independently in the lab.</li> </ul>   | <p>Modules EnviMiBi, ApplAnaChem, Electrochem, MemTech, StabIso, TechEngWat, WastewatTreat, WatPolMonit</p>   |

|---|------------------------------|-------------|----------------------|----------|
| I   | Applied Analytical Chemistry | C           | 3                    | 150 h    |
| <b>Sum (Compulsory and Supplementary Courses)</b> |                              |             | 3                    | 150 h    |

### Learning Outcomes of the Module

Students will understand the opportunities and limitations of instrumental analytical methods to obtain information on environmental systems. The students dispose of detailed knowledge of the analytic chemistry and arrange results of the research in the historical context and they get knowledge about principles and mechanisms of the chemistry. The students are able, to understanding the analytic process of the sampling and the sample preparation through the determination method up to the evaluation and estimation. The students have knowledge of advanced instrumentally analysis methods. They can apply the analysis methods in different areas, e.g., environment, industry.

|   |
|---|
| <b>Associated Key Qualifications</b>  |
| <p>basic knowledge, systemic thinking, scientific thinking, structural ability, switching ability Ability to choose appropriate analytical methods for their own research questions based on the acquired theoretical and practical knowledge Ability to evaluate the quality of reported or achieved analytical data They have the ability in the knowledge extraction in the context of the teaching form "lecture".</p> <p>The students develop the expertise to assess theoretical and practical handling of the most important methods of instrumental analysis. They have the ability to demonstrate knowledge and understanding of essential concepts and theories relating to the subject matter.</p> |
| <b>Module examinations to gain grades</b>   |
| Written exam (120 Minutes)  |
| <b>Contribution of the Module Grade for the Final Grade</b>   |
| Share according to the credits (5/120)  |

|                                     |           |                     |  |

| <b>Course Name</b>                  |           | Abbreviation Course |  |
| <b>Applied Analytical Chemistry</b> |           |                     |  |
| Lecturer                            | Faculty   | Module Type (C/S)   |  |
| Prof. Dr. Oliver J. Schmitz         | Chemistry | C                   |  |

| Designated Semester | Frequency | Language | No. students |
|---------------------|-----------|----------|--------------|
| 2                   | SoSe      | english  |              |

| SWS | Presence <sup>1</sup> | preparation, self tutoring, preparation for exam (h) | Workload |
|-----|-----------------------|--|----------|
| 3   | 45 h                  | 105 h  | 150 h    |

|  |
|--|
| <b>Education Methodology</b>   |
| Lecture (2 SWS) & Seminar (1 SWS)  |
| <b>Learning Targets</b>  |
| Acquisition of basic theoretical and practical knowledge in applied analytical chemistry. The handling and preparation of samples and the reduction of matrix effects through application of appropriate analytical methods will be addressed.<br>Target analytical niveau: Eurocurriculum   |
| <b>Contents</b>  |
| Concrete knowledge transfer with regard to the chemical and analytical preparation of samples (material and environmental samples, biological samples): Handling of samples and analytical methodology with respect to the most important instrumental techniques of atomic, isotopic and molecular analysis. <ul style="list-style-type: none"> <li>• Sampling, sample storage and sample preparation.</li> <li>• X-ray analyses (powder diffractometry, fluorescence), chromatography (GC, LC, IC), mass spectrometry (EI, CI, ICP) and hyphenated methods (GC/MS, LC/AFS, etc.)</li> <li>• Qualitative and quantitative determination of main, trace and ultratrace components as well as the ratio of stable and unstable isotopes.</li> <li>• Sample fractionation, determination of total content and relevant parameters, mass balance</li> </ul> |
| <b>Examination</b>   |
| Written exam (120 Minutes)   |

<sup>1</sup> Bei der Berechnung der Präsenzzeit wird eine SWS mit 45 Minuten als eine Zeitstunde mit 60 Minuten berechnet. Dies stellt sicher, dass ein Raumwechsel und evt. Fragen an Lehrende Berücksichtigung finden.

| <b>Learning Outcomes of the Module</b>  |
| The students have knowledge how deeply microorganisms are involved in geochemical cycles. They are able to understand that microbial ecology, geochemistry and geology are closely connected. They obtain knowledge of the physiology and biochemistry of the microorganisms for the understanding of geochemical processes.  |
| <b>Associated Key Qualifications</b>  |
| The students <ul style="list-style-type: none"> <li>gain an overview of geochemical processes</li> <li>have knowledge of the interactions of microorganisms and materials in their environments</li> <li>know how microorganisms are classified, the physical constraints governing their growth, molecular approaches to studying microbial diversity, and life in extreme environments</li> <li>have the ability to the systematic presentation of complex correlations between epidemiology of water-related infectious diseases.</li> </ul> |

| Lecture (2 SWS)   |
| Learning Targets  |
| <p>The students will learn how deeply microorganisms are involved in geochemical cycles and often are the responsible driving agents. They will understand that microbial ecology, geochemistry and geology are closely connected. The students will acquire knowledge of the physiology and biochemistry of the microorganisms involved is of utmost importance for the understanding of geochemical processes and will be intensified where necessary. It shall become obvious to them that Earth as a habitat has been largely created by microorganisms. Processes in this habitat are cyclic processes -Earth as a batch culture- and will be discussed in detail.</p> |

<sup>2</sup> Bei der Berechnung der Präsenzzeit wird eine SWS mit 45 Minuten als eine Zeitstunde mit 60 Minuten berechnet. Dies stellt sicher, dass ein Raumwechsel und evt. Fragen an Lehrende Berücksichtigung finden.

| <b>Learning Outcomes of the Module</b>  |
| The students get knowledge about statistics including probability calculus, random variables, interval estimates and regression analysis. They are able to use these in modern chemometric data evaluation methods. They can solve problems within a programming environment.   |
| <b>Associated Key Qualifications</b>  |
| Students have ability to recognize and analyze novel problems and plans strategies to their solution. They can use the Students are able to present statistical facts and solutions in the seminar groups and discuss. They can represent linguistically understandable and technically correct to scientific facts. Students have the ability to formulate problems in mathematical form, to facilitate their analysis and solution. They are in a position as a general tool of expressive to use mathematical recommend. |

| <b>Learning Outcomes of the Module</b>   |
| The students learn different modern methods and special work techniques of analytical chemistry and their applications. They can estimate and evaluate the advantages and disadvantages of these methods critically. They learn how to present their work in a written report.   |
| <b>Associated Key Qualifications</b>   |
| Students have competence in the planning, design and execution of practical investigations, from the problem recognition stage through to the evaluation and appraisal of results and finding; this to include the ability to select appropriate techniques and procedures. They know the principles and procedures used in chemical analysis and the characterization of chemical compounds. Students own the principal techniques of structural investigation, including spectroscopy. They have skills in the monitoring, by observation and measurement, of chemical properties, events or changes, and the systematic and reliable recording and documentation thereof. Students have skills in the presenting scientific material and arguments in writing and orally. |
| <b>Module examinations to gain grades</b>  |
| Colloquia and report in the practical course (study achievements); conclusion colloquium (30 – 60 Minutes) with an university teacher (test achievement)   |

| <b>Education Methodology</b>   |
| Experimental project work (14 SWS) & Seminar (1 SWS)   |
| <b>Learning Targets</b>  |
| The students acquire advanced theoretical and practical basic knowledge in applied analytical chemistry. By direct integration into a project-oriented research topic they learn how to set-up and validate analytical methods aiming at answering research questions. The students receive thus also an active insight into the everyday life in a modern analytical laboratory.  |
| <b>Contents</b>  |
| Rather than carrying out pre-set identical experiments on a lab course level as on the Bachelor level, in the Master practical course analytical chemistry students select topics suggested by all research groups involved in analytical chemistry training, covering topics from advanced spectrometry via hyphenation techniques to sophisticated mass spectrometry. Although only a limited and individually selected number of analytical techniques will thus be learned hands-on, this procedure contributes to the development of an individual study profile and due to the research; orientation is much more motivating for the students than carrying out pre-selected experiments with known results. |

<sup>7</sup> Bei der Berechnung der Präsenzzeit wird eine SWS mit 45 Minuten als eine Zeitstunde mit 60 Minuten berechnet. Dies stellt sicher, dass ein Raumwechsel und evt. Fragen an Lehrende Berücksichtigung finden.

|  |

| <b>Learning Outcomes of the Module</b>  |
| Students learn how to set-up a small-scale research project, to carry out the required experimental work independently in a limited period of time and to present their results in a written report and/or an oral presentation.  |
| <b>Associated Key Qualifications</b>  |
| Students have ability to interpret data derived from the laboratory observation and measurements in term of their significance and relate them to appropriate theory. They own ability to recognize and implement good measurement science and practice. They have communications skills, covering both written and oral communication. Students have competence in the planning, design and execution of practical investigations, from the problem recognition stage through to the evaluation and appraisal of results and finding; this to include the ability to select appropriate techniques and procedures. |

| Learning Outcomes of the Module   |
|---|
| Students should acquire an advanced understanding of chemical processes relevant in natural and technical aqueous systems, and of conceptual models and quantitative approaches to describe these. Controls of behavior and fate of organic and inorganic contaminants will be emphasized. Students will know how to apply the acquired knowledge by carrying out case studies on the behavior of chemicals in aqueous systems. |
| Associated Key Qualifications   |
| Students have study skills needed for continuing professional development. They have ability to recognize and analyze novel problems and plans strategies for their solution. Students own presentations and communications skills, covering both written and oral communication. They have interpersonal skills, relating to the ability to interact with other people and to engage in team-working.                          |

| <b>Education Methodology</b>   |
| Experimental and theoretical work and evaluation and written documentation   |
| <b>Learning Targets</b>  |
| The Master Thesis is an experimental or theoretical work presented in written form showing that the students can perform and evaluate a scientific topic within 24 weeks' time. The students will gain experiences with modern scientific methods.<br>The students have the ability to effectively apply theoretical/practical knowledge and competencies to real-world problems in water chemistry. They will understand the opportunities and limitations of these methods to obtain information on water chemistry. They are able to use these methods and to assess and interpret their results. They are able to present their results in an oral and written way. The students have an inside about current relevant research topics in special branches. They are able to analyse results. They are able to participate in scientific discussions about current topics and to assess them critically. |
| <b>Contents</b>  |
| The projects will be provided by the lecturers. The students are free to choose the supervisor by themselves.  |

|--|
| <b>Education Methodology</b>   |
| Lecture (1 SWS) & Seminar (1 SWS)  |
| <b>Learning Targets</b>  |
| The application of Quality Assurance techniques has led to major improvements in the quality of many products and services. In this course the international guides and concepts regarding quality management are imparted and the essential points elaborated. At special examples students learn dealing with international norms. After the course students should be able to establish and validate quality management and assurance systems.            |
| <b>Contents</b>  |
| Quality assurance in analytics and production; Introduction into the terms Good Laboratory Practice, Accreditation, Certification and the corresponding guides like GLP, GMP, EN 45001 und ISO 9000 ff; Requirements concerning a quality management system, e.g. standard operating standard procedures (SOPs), manuals, test devices, validation of methods; Quality Control Charts; Metrology; Documentation and archiving of data; Software Applications |
| <b>Examination</b>   |
| Written exam (120 Minutes) for Module  |

<sup>13</sup> Bei der Berechnung der Präsenzzeit wird eine SWS mit 45 Minuten als eine Zeitstunde mit 60 Minuten berechnet. Dies stellt sicher, dass ein Raumwechsel und evt. Fragen an Lehrende Berücksichtigung finden.

| <b>Learning Outcomes of the Module</b>   |
| On the basis of fundamental knowledge in physical chemistry and (chemical) process engineering, the students will gain detailed insights into the fundamentals of membranes and membrane separations as well as the most important membrane technologies which are applied to water treatment and/or purification. |
| <b>Associated Key Qualifications</b>   |
| Ability to use membrane technologies in the water treatment and/or purification. They know the principles and procedures used in the membrane technologies. Students hold the study skills needed for continuing professional development.   |

| <b>Learning Outcomes of the Module</b>   |
| The students should learn about the special properties of colloids and the structure and dynamics of these systems. They have the ability to describe interfacial phenomena and analyze. They are also able to investigate the complex transport and self-aggregation processes of nanoparticles, surfactants and polymers. The students have acquired the competence to work with colloidal systems, and they can describe the specific structures and properties of these systems and explain. |
| <b>Associated Key Qualifications</b>   |
| The students have a working knowledge of nanoparticles and colloids. Judgments skills, self-learning   |
| <b>Module examinations to gain grades</b>  |
| Written (120 Minutes) or oral (30 – 60 Minutes) exam   |
| <b>Contribution of the Module Grade for the Final Grade</b>  |
| Share according to the credits (5/120)   |

|---|
| <b>Learning Outcomes of the Module</b>  |
| <p>The students gain basic knowledge at the topical intersections of nano-materials, biology and photonics. They will know modern methods of Nanobiophotonics, how biological and optical functions can be designed using nanomaterials and photonic tools useful in biology and medical diagnosis and therapy.</p> <p>In the case studies, students should be able to find a suitable nanomaterial as solution for a biological or biomedical exercise with the tool "Light". They are able to select synthesis routes, biofunctionalization and appropriate characterization methods for specific problems, these apply and estimate. The theoretical knowledge of these three areas "nano", "bio" and "photonics" will be experimentally proved in the small groups during the internship.</p> |
| <b>Associated Key Qualifications</b>  |
| Basic knowledge, problem-solving, case study analysis, systems thinking, scientific thinking and working methods, structural capacity, employability  |
| <b>Module examinations to gain grades</b>   |

| <b>Education Methodology</b>   |
| Lecture (2 SWS) & Seminar (1 SWS)  |
| <b>Learning Targets</b>  |
| Aufbauend auf ihrem Wissen in der Naturwissenschaft erwerben die Studierenden Grundkenntnisse an den Schnittstellen der Themenfelder Nanomaterialien, Biologie und Photonik. Ziel ist die Einführung in moderne Methoden der Nanobiophotonik, indem erlernt wird, wie biologische und optische Funktionen gezielt mittels Nanomaterialien eingestellt werden um diese mit photonischen Werkzeugen nutzbringend in der Biologie sowie medizinischen Diagnose und Therapie einsetzen zu können. Fallbeispiele sollen die Teilnehmer des Kurses in die Lage versetzen, ein geeignetes Nanomaterial auszuwählen um eine biologische bzw. biomedizinische Aufgabenstellung mit dem „Werkzeug Licht“ zu lösen. In gleicher Weise sollen die Teilnehmer in der Lage sein, für konkrete Problemstellungen Syntheserouten, Biofunktionalisierungen und passende Charakterisierungsmethoden auszuwählen, anzuwenden und zu bewerten. |
| <b>Contents</b>  |
| Einführung in die NanoBioPhotonik<br>Nanobiomaterialien: <ul style="list-style-type: none"> <li>• Einsatzgebiete, biologisch und biophotonisch relevante Eigenschaften</li> <li>- Synthese, Fraktionierung, Reinigung</li> </ul>   |

<sup>17</sup> Bei der Berechnung der Präsenzzeit wird eine SWS mit 45 Minuten als eine Zeitstunde mit 60 Minuten berechnet. Dies stellt sicher, dass ein Raumwechsel und evt. Fragen an Lehrende Berücksichtigung finden.

#### Charakterisierung:

- Methoden zur Strukturbestimmung und Funktionalitätsbestimmung
- Umgebungsvariable Eigenschaften, Stabilisierung, Protein Corona
- Fallbeispiele aus der Praxis - Methodenkombination

#### Funktionalisierung:

- Grundlagen, Bindungsarten, Affinitäten, Klick-Chemie
- Markierung (Tagging), Biofunktionalisierung, biomolekulare Erkennung

#### Biophotonische Methoden, Lösungsstrategien und Fallbeispiele:

- Schwangerschaftstests (Lateral Flow Assays), Endoskopie, Krebs-Targeting, ...

#### Diagnose-Methoden der NanoBiophotonik:

- Molekular: Biosensorik, molekulare Diagnose, SERS
- Intrazellulär: Kopplungen, Plasmonik, FRET, hochauflösende Lebendzellmikroskopie
- Zellulär: Markierung, Differenzierung, Zellsortierung, FACS
- Gewebe/Organ: Immunhistologie, Immunogold, Mikroskopie, Spektroskopie
- Moderne Methoden: Optische Ganzkörperbildgebung, Photoakustik, multimodale Bildgebung

#### Therapieansätze der NanoBiophotonik:

- Chemische-pharmakologische Ansätze: Solubilisieren, Verkapseln, Release-Systeme
- Physikalische Ansätze: Photothermie, Photodisruption, Laserskalpell
- Ausblick: klinische NanoBioMedizin, Biophotonik in der regenerativen Medizin

#### Examination

Written (120 Minutes) exam to the Contents from the lecture and practical course

#### Literature

Aus den folgenden Lehrbüchern werden ausgewählte Kapitel im Semesterapparat zur Verfügung gestellt:

- Jürgen Popp et al., Handbook of Biophotonics, Wiley, 2011, Vol. 1 (ISBN 987-3-527-41047-7), Vol. 2 (ISBN 987-3-527-41048-4), ausgewählte Kapitel
- Ricardo Aroca, Surface-enhanced vibrational spectroscopy: Chapter 2 (The interaction of light with nanoscopic metal particles and molecules on smooth reflecting surfaces), ISBN: 0-471-60731-2
- Greg T. Hermanson, Bioconjugate techniques, ISBN: 978-0-12-370501-3
- S. Schlücker: Surface-enhanced Raman spectroscopy: Analytical, Biophysical and Life Science Applications. ISBN: 978-3-527-32567-2

und um weitere Übersichtsartikel ergänzt (siehe elektronischer Semesterapparat).

#### Further Information on the course

Die Inhalte der Vorlesung werden im zugehörigen Blockpraktikum/Methodenkurs vertieft

| Students should get to know the principles and instrumentation in modern stable isotope analysis with emphasis on light elements and will acquire hands-on experience on how to perform stable isotope analysis.  |
| <b>Associated Key Qualifications</b>  |
| Presentations skills, teamwork, problem solving capabilities, scientific method. Students have study skills needed for continuing professional development. They have ability to recognize and analyze novel problems and plans strategies for their solution. Students own presentations and communications skills, covering both written and oral communication. They have interpersonal skills, relating to the ability to interact with other people and to engage in team-working. |
| <b>Module examinations to gain grades</b>   |
| Written (120 Minutes) exam, presentation and lab course reports   |
| <b>Contribution of the Module Grade for the Final Grade</b>   |

|   |
|---|
| <b>Education Methodology</b>  |
| Lecture (2 SWS) and Seminar (1 SWS)   |
| <b>Learning Targets</b>   |
| Students should get to know the principles and instrumentation in modern stable isotope analysis with emphasis on light elements. By studying exemplary applications and case studies they will learn for which problems in environmental science isotope analysis might provide solutions.   |
| <b>Contents</b>   |
| Isotope fundamentals, isotope fractionation, referencing and calibration; Instrumentation, principles of isotope analysis; Gas source isotope ratio mass spectrometry (C, H, N, and O), bulk techniques: dual inlet, continuous flow, compound specific isotope analysis, position-specific isotope analysis; Isotope analysis of heavy elements: multicollector-ICP-MS, thermal ionization MS (e.g., Fe, Ca, Sr, Pb); Applications of stable isotope analysis in environmental science (source apportionment, transformation (extent and pathways), food sciences (food adulteration, food origin), geosciences (tracing of geochemical pathways by stable isotopes), forensic sciences (doping analysis). |
| <b>Examination</b>  |
| Written (120 Minutes) exam and presentation (poster or oral)  |

<sup>20</sup> Bei der Berechnung der Präsenzzeit wird eine SWS mit 45 Minuten als eine Zeitstunde mit 60 Minuten berechnet. Dies stellt sicher, dass ein Raumwechsel und evt. Fragen an Lehrende Berücksichtigung finden.

| Education Methodology  |
| Lab Course (3 SWS)   |
| Learning Targets   |
| Acquisition of practical knowledge and hands-on experience in stable isotope analysis. By own measurements students shall realize experimental pitfalls in stable isotope analysis and be able to evaluate isotope data including precision and accuracy.              |
| Contents   |
| Performing stable isotope analyses using modern GC-IRMS instrumentation for selected experiments on: <ol style="list-style-type: none"> <li>1. vanillin authentication</li> <li>2. origin of alcoholic beverages</li> <li>3. practical isotope mass balance</li> </ol> |

|---|
| <b>Learning Outcomes of the Module</b>  |
| Students have theoretical and practical knowledge for different water treatment processes.  |
| <b>Associated Key Qualifications</b>  |
| Basic knowledge, systemic thinking, scientific thinking. The possibility to use this knowledge in the praxis. Competence in planning, design and execution of practical investigation, from the problem recognition stage through to the evaluation and appraisal of results and finding; this to include the ability to select appropriate techniques and procedure. |

| <b>Education Methodology</b>  |
| Lecture (2 SWS)   |
| <b>Learning Targets</b>   |
| The students will get an overview of the use of living systems (i.e. microbial communities, microorganisms or biological molecules such as enzymes) for the production of relevant substances and process optimization for human benefit.<br>Starting with a general overview of biotechnological applications and significance, classical fermentations in food industries, special production strains, biocatalysis by enzymes as well as environmental biotechnology will be discussed |
| <b>Contents</b>   |
| 1) Biotechnology (overview)<br>2) Classical Biotechnology (Fermentations, productions strains etc.)<br>3) Enzyme Catalysis for production and process optimization<br>4) Metabolic engineering & Synthetic Biology<br>5) Selected clean-up technologies of contaminated sites and microbial processes during bioremediation<br>6) Monitoring methods for bioremediation<br>7) Oil production and enhanced oil recovery<br>8) Metal leaching and metal production<br>9) Biogas production  |
| <b>Examination</b>  |
| Written (120 Minutes) examination   |

<sup>25</sup> Bei der Berechnung der Präsenzzeit wird eine SWS mit 45 Minuten als eine Zeitstunde mit 60 Minuten berechnet. Dies stellt sicher, dass ein Raumwechsel und evt. Fragen an Lehrende Berücksichtigung finden.

| Learning Outcomes of the Module   |
|---|
| <p>The class is organized as a block course, with lectures in the morning followed by practical work in the laboratory as well as bioinformatics analyses. During lectures, students will get an overview of biochemical, molecular biological and genetic methods as well as basic bioinformatics skills necessary to approach microbial physiology and to develop biotechnological applications. Students will be introduced to theoretical physiological and metabolic concepts as well as biotechnological application of enzymes and microbes. The lecture will convey basic bioinformatics skills for cloning of genes, prediction of gene function, phylogenetic comparisons.</p> <p>In the practical course, students will perform own projects on topics of scientific interest to the MEB group and will work on novel scientific questions as a small team.</p> <p>Starting with a general overview of physiology, methods and bioinformatics, students will learn state of the art biochemical, molecular biological and genetic methods, advanced physiological, biotechnological concepts as well as basic bioinformatics approaches.</p> |

| <b>Learning Outcomes of the Module</b>  |
| <p>The class is organized as a block course, starting with several days of lectures followed by the practical work that will be performed within individual research projects. During lectures, students gain theoretical knowledge about microbial community ecology and microbial biodegradation as well as about analytical techniques to measure and interpret both. The lectures will convey processing of 16S sequences and bioinformatic and statistical downstream analysis as well as stable isotope techniques to measure microbial degradation activity.</p> <p>In the practical part, students will carry out individual research projects on biodegradation of environmental pollutants or remediation technologies concerning current research topics of the group.</p> |
| <b>Associated Key Qualifications</b>  |
| <p>Students will be able to perform microbial community analysis and measure microbial degradation activities and combine both aspects into a coherent interpretation. Deeper knowledge on biodegradation processes will be gained.</p>   |
| <b>Module examinations to gain grades</b>   |
| <p>Protocol and presentation of results.</p>  |

| <b>Learning Outcomes of the Module</b>   |
| Students gain basic knowledge of the chemical principles of food ingredients (carbohydrates, lipids, proteins, etc.). In the course, typical chemical reactions of the ingredients will be discussed. In addition, an overview of analytical methods will be given in order to characterize the ingredients. Accordingly, the students will acquire the competence about the most important methods and their practical use to determine the authenticity of food. |
| <b>Associated Key Qualifications</b>   |
| Knowledge of the chemistry of carbohydrates, proteins and lipids in foods and their analysis.  |
| <b>Module examinations to gain grades</b>  |
| Written exam (120 Minutes) or oral exam (30 Minutes)<br>Course Achievement: a lecture in the seminar (10 Minutes)  |

| <b>Education Methodology</b>   |
| Lecture (2 SWS) & Seminar (1 SWS)  |
| <b>Learning Targets</b>  |
| Students gain basic knowledge of the chemical principles of food ingredients (carbohydrates, lipids, proteins, etc.). In the course, typical chemical reactions of the ingredients will be discussed. In addition, an overview of analytical methods will be given in order to characterize the ingredients. Accordingly, the students will acquire the competence about the most important methods and their practical use to determine the authenticity of food. |
| <b>Contents</b>  |
| Fundamentals of the chemistry of carbohydrates, proteins and lipids, analysis of food ingredients using examples, determination of the authenticity of foodstuffs.   |
| <b>Examination</b>   |
| Written exam (120 Minutes) or oral exam (30 Minutes)<br>Course Achievement: a lecture in the seminar (10 Minutes)  |

<sup>29</sup> Bei der Berechnung der Präsenzzeit wird eine SWS mit 45 Minuten als eine Zeitstunde mit 60 Minuten berechnet. Dies stellt sicher, dass ein Raumwechsel und evt. Fragen an Lehrende Berücksichtigung finden.

| <b>Learning Outcomes of the Module</b>  |
| Students will gain knowledge of the biochemical principles of nutrition as well as their analytics. Using various examples, the influence of nutrition on different metabolic pathways will be shown and discussed how these processes can be characterized analytically. The students acquire the competence about the function and characterization of certain functional ingredients in food as well as in the human organism. |
| <b>Associated Key Qualifications</b>  |
| Basic knowledge of the biochemistry of various food ingredients and their analysis.   |
| <b>Module examinations to gain grades</b>   |

| <b>Learning Outcomes of the Module</b>  |
| This course is organized as a block course, with lectures most mornings and actual research the rest of the time (mornings and afternoons). In the lectures, the students get information on the basics of electrochemistry and electrocatalysis as well as their atomistic description based on density functional theory calculations. The students are individually involved in existing research projects of the working group Theoretical Inorganic Chemistry (WG Exner) and work on their own small research project. |
| <b>Associated Key Qualifications</b>  |
| The students get acquainted with the theory of catalytic processes on solid-state electrodes including their theoretical description by electronic structure calculations in the density functional theory approximation.   |
| <b>Module examinations to gain grades</b>   |
| Presentation of results   |

| <b>Education Methodology</b>  |
| Lecture with practical course (6 SWS)   |
| <b>Learning Targets</b>   |
| This course is organized as a block course, with lectures most mornings and actual research the rest of the time (mornings and afternoons). In the lectures, the students get information on the basics of electrochemistry and electrocatalysis as well as their atomistic description based on density functional theory calculations. The students are individually involved in existing research projects of the working group Theoretical Inorganic Chemistry (WG Exner) and work on their own small research project.   |
| <b>Contents</b>   |
| Fundamentals of electrochemistry; potentials; Helmholtz double layer; Gouy Chapman model; Butler-Volmer equation; electrode kinetics; overvoltages; electrocatalytic processes; hydrogen evolution; oxygen evolution reaction; chlorine evolution reaction; hydrogen oxidation; oxygen reduction reaction; electrolyzer; fuel cell; metal-air battery; atomic description; density functional theory; computational hydrogen electrode; linear scaling relationships; academic writing and presentation; exemplary small research project in the field of theoretical electrocatalysis. |
| <b>Examination</b>  |
| Scientific presentation of the research project   |

<sup>31</sup> Bei der Berechnung der Präsenzzeit wird eine SWS mit 45 Minuten als eine Zeitstunde mit 60 Minuten berechnet. Dies stellt sicher, dass ein Raumwechsel und evt. Fragen an Lehrende Berücksichtigung finden.
