Associated persons*: _____

Institute/clinic/unit: _____

** Persons who have contributed to the generation of the images and co-own copyright. In general, this should include the scientist(s)/technician(s) who performed the image acquisition, the scientist(s)/technician(s) who prepared the samples, and the principal investigator supervising the work, if these roles are not fulfilled by the submitting person.*

With my signature I declare...

- that I own all copyrights of the submitted image/s and text/s material and that the named associated persons all agree to this submission.
- that I and all associated persons agree to the publication of the submitted image material and explanatory captions, including naming our surnames/names/working groups/institutes/clinic/unit in the "Life Beyond Vision" calendar and on the websites of the Imaging Center Essen and the Institute for Experimental Immunology and Imaging of the University of Duisburg/Essen, represented by Prof. Matthias Gunzer. The publication serves the purpose of realization and public presentation of the calendar project "Life Beyond Vision". I am aware that publishing on the Internet results in global access with the associated risks.
- that I/we agree to a further use of the image and text material by the public relation offices of the UDE and UKE and the Department of Strategy, Communication and Marketing at the Dean's Office of the Faculty of Medicine of UDE for presentation and publicity of the calendar project.
- that I am aware that I will not receive any payment for this publication.
- that I am aware that neither the UDE nor the Institute for Experimental Immunology and Imaging nor the IMCES as publisher of the calendar and as operator of the internet pages assumes liability for unknown use of the published data by third parties.
- that the images have been taken in compliance with all legal requirements**.

***For example, the generation of images in animal experimental approaches must be covered by an approved animal experiment application and the image analysis of human (patient) samples usually requires an approved ethics application.*
