

## Press Release

October 2014

### Maney to publish *Ship Technology Research*

From 2015, Maney Publishing will be the new publisher of *Ship Technology Research – Schiffstechnik*, on behalf of the University of Duisburg-Essen.

Established in 1952 as *Schiffstechnik*, *Ship Technology Research* publishes applied research on ships and offshore structures. The journal enables engineers and researchers to learn the latest developments in research, design, manufacture, and the operation and maintenance, of ships and offshore structures.

The journal is edited by Professor Bettar el Moctar (Institute of Ship Technology, Ocean Engineering, and Transport Systems, University of Duisburg-Essen, Germany), Dr Vladimir Shigunov (DNV GL, Germany) and Professor Sören Ehlers (University of Technology Hamburg-Harburg, Germany and Norwegian University of Science and Technology, Norway).

Professor el Moctar comments, *"We are looking forward to a fruitful co-operation with this reputable publishing house. The partnership with Maney Publishing will certainly contribute to improve the dissemination of the journal in the scientific world"*.

From 2015, *Ship Technology Research – Schiffstechnik* will be available on Maney Online, Maney's electronic hosting platform and will have a new online submission and peer review system (Editorial Manager), which will enhance the publishing experience for authors and readers alike.

Mark Simon, Publishing Director, welcomes the new partnership. *"This is an excellent addition to our growing portfolio of engineering journals, in a subject of global importance. Over 90% of international trade travels by sea, and the design and safety of ships and offshore structures, some of which are among the largest and most complex moveable structures built, are crucial for the transport and discovery of the world's raw materials and products. We look forward to taking the journal to the next level of international distribution, online usage, and citation."*
