

**Table 6.** Truth table: set-theoretic consistency of causal combinations as subsets of enlargement

| <b>poltrans</b> | <b>ecotrans</b> | <b>reform</b> | <b>conflict</b> | <b>attention</b> | <b>enlarge</b> | <b>Consistency</b> | <b>Number of cases</b> |
|-----------------|-----------------|---------------|-----------------|------------------|----------------|--------------------|------------------------|
| 1               | 1               | 1             | 1               | 1                | 1              | 0.88               | 4                      |
| 1               | 1               | 1             | 0               | 1                | 1              | 0.84               | 2                      |
| 1               | 1               | 1             | 1               | 0                | 1              | 0.84               | 6                      |
| 1               | 0               | 1             | 1               | 1                | 1              | 0.83               | 8                      |
| 1               | 1               | 1             | 0               | 0                | 1              | 0.81               | 3                      |
| 1               | 0               | 1             | 0               | 0                | 0              | 0.795              | 3                      |
| 1               | 0               | 1             | 1               | 0                | 0              | 0.78               | 7                      |
| 1               | 0               | 0             | 1               | 1                | 0              | 0.78               | 4                      |
| 1               | 0               | 0             | 0               | 1                | 0              | 0.77               | 5                      |
| 1               | 0               | 0             | 0               | 0                | 0              | 0.73               | 2                      |
| 1               | 0               | 0             | 1               | 0                | 0              | 0.71               | 6                      |

*Note:* Truth table produced with fs/QCA 2.5. 1 represents the presence of the condition and 0 denotes its absence.
