# JUNIOR BACKEND ENGINEER

As a Backend Software Engineer at Zalando Payments in Dortmund, you will be working on the core of our offering: The Payment API that we are providing to our customers and which is used by multiple customer facing applications, including the checkout page that you have already used if you have ever purchased anything from Zalando.

Controlled by this API, our systems orchestrate the complex payment process supporting over twenty different payment methods, from prepayment and invoice to credit card and direct debit, as well as many European payment methods you may not have heard about yet - unless you already bring a payment background..

WHAT WE'RE LOOKING FOR

-Strong knowledge of JVM based technology stacks, such as Java, Kotlin and Spring Boot (Scala knowledge would be very beneficial) as well as a good understanding of RDBMS and NoSQL databases, experience in designing distributed systems, microservices & cloud architectures/platforms (preferably AWS)

-Strong sense of ownership, entrepreneurial & analytical thinking add to your excellent communication skills (fluent in written & spoken English is a must)
Grade in computer science

-If you have prior experiences in fin-tech, this is certainly a plus, but not a requirement.
