

# Full-Stack-Developer

## We're looking for you

You want a flexible job with actual responsibilities? You are proficient in Javascript/Typescript for frontend and backend development. Maybe you even have some experience in 3D-Frameworks and WebAssemblies? Join our projects from conception through development, deployment and maintenance.

We develop online web applications for the medical technology sector. More specifically enabling orthopedic caregivers to provide individualised 3d-printed devices and optimised workflows to the benefit of their patients.

Contact us now at [jobs@3dup.app](mailto:jobs@3dup.app) and be part of our selforganising team.

---

## Our Technologystack:

- Our Backends are run on Node.js/Express.js and provide REST endpoints
- We use TypeScript for our Three.js / Vue.js Frontend Web-Applications
- We are in the early stages of development and will rely on your research/testing for making architectural decisions for the future

## About you:

- You're not afraid of trying/learning new things
- You can work/familiarize yourself with our current Tech-Stack
- You possess basic DevOps-Skills and are not afraid of the CLI
- You can research and present technology overviews
- You take responsibility and possess drive
- Agile development is not a foreign concept to you
- You know best how you are most productive: on site in Kassel/Düsseldorf, with homeoffice days or completely remote

Please provide:

- A short vita including your relevant credentials
- Projects you have worked on and what your responsibility in those projects was
- Technologies you are interested in that could be beneficial to us
- Your preferred starting date and equipment, compensation and work accommodation (onsite/remote, hours, etc)
- Please send your documents in pdf format to [jobs@3dup.app](mailto:jobs@3dup.app)
