## Overview of Policies

- **Statement required:** All published articles must include a Data Availability Statement (DAS). Our submission server creates the statement for authors based on questions they answer when submitting. See [Crafting Data Availability Statements](#) and [Which Data Availability Statement is Right for You?](#)
- **Data sharing encouraged:** Authors are strongly encouraged to share data publicly and according to [FAIR \(Findable, Accessible, Interoperable, Reusable\) principles](#) at publication.
- **Citation required:** Publicly shared data must be cited in the reference list, and the citation must be included in the DAS.
- **Embargoes permitted:** Embargoes on public data sharing are allowed for reasons like privacy or trade secrets.
- **When data aren't available:** If data can't be made public, authors must agree to share data privately with editors, reviewers, and readers upon reasonable request. Authors should also provide a reason or further information in their statement.

Note: This policy applies to manuscripts submitted to *Physical Review D* and *PRX Energy* on or after September 4, 2024, and to manuscripts submitted to all other *Physical Review* journals on or after December 11, 2024.

Anders als noch vor 2 Monaten:

## Data Availability

All published articles must have a [Data Availability Statement](#) that describes the availability of associated research data and software. It is not mandatory to share data or software.

Research data is information that is necessary to reproduce the study's findings. This includes tabular data, code, software, graphs, images, audio, documents, video, raw and/or processed data, including numerical data created from equations.

Your statement can be updated at resubmission or acceptance. **It will be available to reviewers and included in your final article.**

**Select the statement that best represents your submission.**

- There are no publicly available research data or software supporting this manuscript. Requests for further information or data should be sent to the authors.  
*Choose this option if you are not sharing data or software publicly, if you did not use any data, or if you intend to provide your statement later.*
- I have written a detailed data and/or software availability statement, and I have included appropriate references.
