

Oxidative Processes in Water Technology

Lecture (2 h): Wednesday 14¹⁵ - 16⁰⁰, T03 R03 D89
Tutorial + Seminar (1h): Wednesday 16¹⁵ - 17⁰⁰, T03 R03 D89

Subject	Who?	Date	Date Tutorial
Introduction to oxidative processes and course organization	HL/All	13.04.16	
Kinetics I	HL	20.04.16	
Kinetics II	HL	27.04.16	11.05.16
Mechanisms I	HL	11.05.16	18.05.16
Mechanisms II	HL	18.05.16	25.05.16
Applications in water treatment I	HL	25.05.16	01.06.16
Applications in water treatment II	HL	01.06.16	
Applications in wastewater treatment I	JT	08.06.16	
Applications in wastewater treatment II	JT	22.06.16	22.06.16
Disinfection/transformation by-products: (Eco)toxicological evaluation	JT	29.06.16	29.06.16
Economical considerations	JT	06.07.16	06.07.16
Wrap-Up	all	13.07.16	
Exam	27.07.16/23.09.16		

Note that this is a **preliminary timetable** and may be subject of change!

Major **aims** of the course:

- Overview of routine and state-of-the-art oxidative processes used in water and wastewater treatment
- Advanced understanding of fundamental transformation processes involved in technical processes
- Evaluation of advantages and drawbacks of oxidative processes for exemplary applications
- Development of criteria for the selection of appropriate technological solutions

- **Organisation**

The course is given by Dr. Holger Lutze (holger.lutze@uni-due.de) and Dr. Jochen Türk (tuerk@iuta.de), and will be supported by the PhD students M.Sc. Sarah Willach (sarah.willach@uni-due.de) and M. Sc. Fabian Itzel (itzel@iuta.de) and B. Sc. Jens Terhalle (Jens.Terhalle@stud.uni-due.de).

- We will gather contact data of all participants on 13th of April. We will then form up to six groups of students by incorporating people with different levels of expertise and backgrounds in each group. By doing so, all of you will benefit most.
- Each group presents in the four tutorials up to 1st of June their solution to a specified problem in a problem set handed out in the course. Their approach will be discussed. It is not the primary goal to show the correct result but to learn how to tackle such problems.
- Ca. end of May each group will receive a paper that shall be read in detail and very critically reviewed. The groups have to deliver a written review (ca. 2 pages) to the supporting PhD students and to give a short presentation (10-15 min) on the major results discussed in the paper and the points to be criticized in the final four tutorial sessions in June/July indicated in the timetable above.
- Please note that the review is a mandatory part of the module "Oxidative Processes".

For a successful completion of this course you need to pass the exam and to present a review of a given paper with your group.

Recommended Reading

We recommend the following review articles for a first overview or in-depth discussion of specific oxidative processes:

Appendix 1: Oxidation States

Chlorine Oxidation States

Oxidation State	-I	0	+I	+III	+IV	+V	+VII
Chem. Formula	Cl ⁻	Cl ₂	HOCl/OCl ⁻	HClO ₂ /ClO ₂ ⁻	ClO ₂	HClO ₃ /ClO ₃ ⁻	HClO ₄ /ClO ₄ ⁻
Name (if acid/base of both species)	Hydrogen chloride/ Chloride	Chlorine	Hypochlorous acid/ Hypochlorite	Chlorous Acid/ Chlorite	Chlorine dioxide	Chloric acid/ Chlorate	Perchloric acid/ Perchlorate
<i>pK_a</i>	-7		7.5	1		-1 to -3	-10

Oxygen Oxidation States

Formal Oxidation State	Chem. Formula	Name (if acid/base of both species)	<i>pK_a</i>
-2	H ₂ O/OH ⁻	Water/ Hydroxide	15.7
-1	H ₂ O ₂	Hydrogen peroxide	11.8
-1	HO [•] / O ^{•-}	Hydroxyl radical/ Oxide radical anion	11.8
-1	RO [•]	Oxyl radical	
-2/3	H ₂ O ₃ /HO ₃ ⁻		7
-1/2	HO ₂ [•] / O ₂ ^{•-}	Hydroperoxyl radical/ Superoxide radical anion	4.8
-1/2	RO ₂ [•]	Peroxyl radical	
-1/3	HO ₃ [•] / O ₃ ^{•-}	Hydrotrioxyl radical/ Ozonide radical anion	-2
0	³ O ₂	Triplet oxygen (ground state)	
0	¹ O ₂	Singlet Oxygen	
0	O ₃	Ozone 	
0	O [•]	Oxygen atom	

R = Organic rest
